

# Specifications for teaser images

**Version of February 2022**

**Three different image formats are created for each teaser image (several subjects desired). All three formats are cut out of one single image. It is therefore important that the image has the following properties:**

- The picture must be delivered in landscape format and also needs to work as a whole.
- The “main object” should be placed in the center of the image and have enough space on all sides, so that a section of it can also be used in portrait format.
- As before, the images should have at least 2000 pixels in width. This way, a good quality of the pictures can be guaranteed.
